

2,6-Piridindikarboksilik asit türevlerinin Cr (III) kompleksleri

Halil İlkimen¹

¹Kimya Bölümü, Kütahya Dumlupınar Üniversitesi, Türkiye

^{*}(halil.ilkimen@dpu.edu.tr)

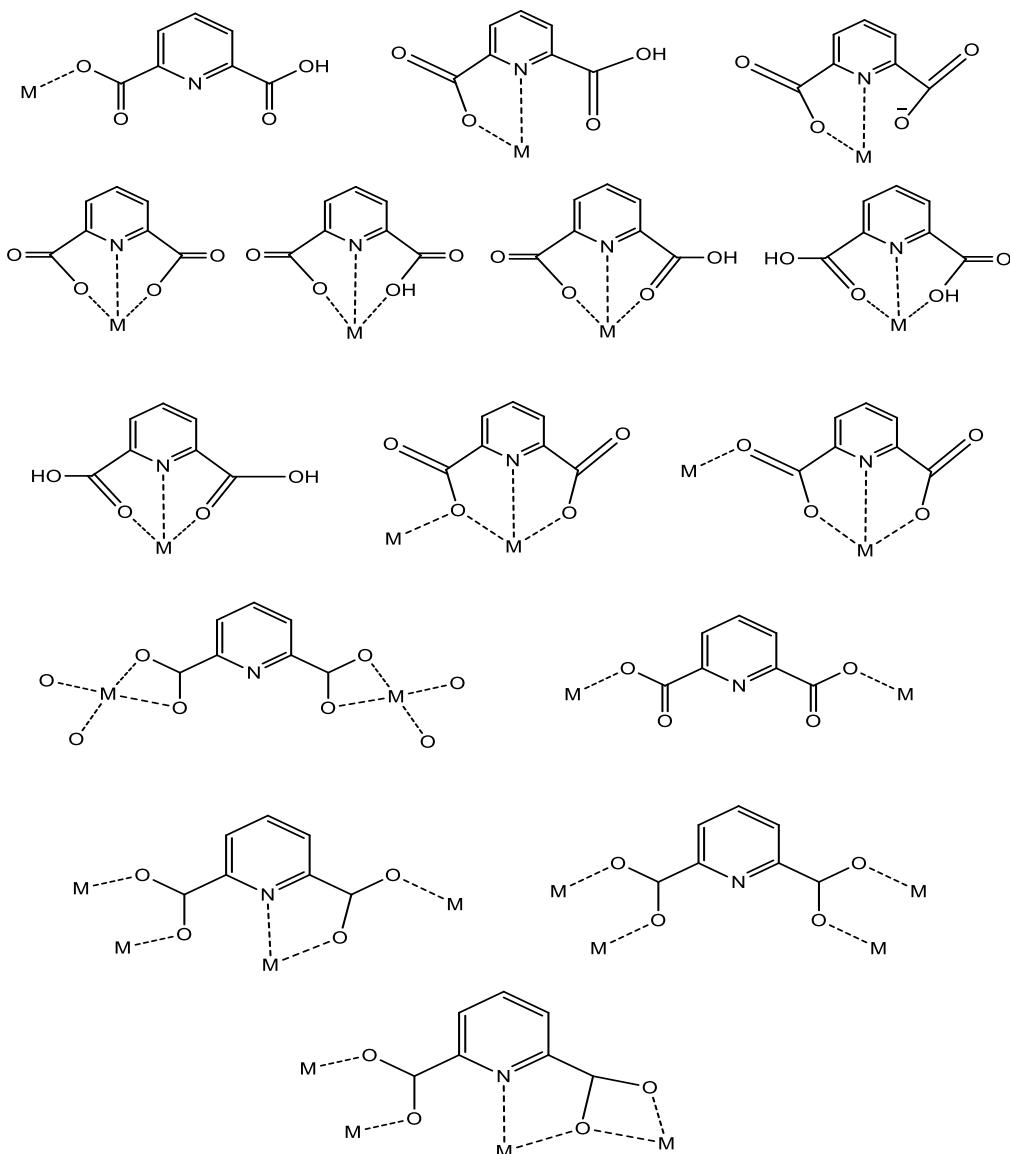

Özet –2,6-Piridindikarboksilik asit ve türevleri (H_2pka), suda çözülebilen, çeşitli işlemlerde enzim inhibitörü, insülin-mimetik etkileri, düşük konsantrasyonlarda demir analizleri, bitki koruyucu, gıda dezenfektanı ve kataliz gibi olarak kullanım alanları vardır. H_2pka formlarının metal komplekslerinin önemi, olağandışı oksidasyon durumlarında kararlılık, çeşitli koordinasyon sayıları ve ilginç yapısal özellikleri bulunmasındandır. 2,6-Piridindikarboksilik asit ve türevleri metal iyonları ile piridin halkasında bulunan azot atomu ve iki karboksilik asit grubundaki dört oksijenden bağlanarak kompleks oluşturdukları gözlenmiştir. Bu çalışmada, literatürde 2,6-piridindikarboksilik türevlerinin Cr(III) ile basit metal kompleksleri, prolin, biguanid, *N*-bromosüksinimit, 9-aminoakridin, kreatin, 1,1'-biphenyl-4,4'-diamin, 8-aminokinolin, aminoguanidin, metformin, 2-aminpirimidin, 4,4'-bipiridin, 4,4'-dimetoksi-2,2'-bipiridin, 2,2'-bipiridin, 4-metilpiridin, o-fenantrolin, 2,9-dimetil-1,10-fenantrolin, 2,6-diaminopiridin, etilendiamin, 2-amino-4/6-metilpiridin, imidazol, pirazol, glisin, 3-amino-1H-1,2,4-triazol, benzen, *o/p*-aminobenzoik asit, nikotinik asit, pikolinik asit, izonikotinik asit ve 2-[(2-hidroksipropilimino)metyl]fenol ile karışık ligandlı metal kompleksleri incelenmiştir.

Anahtar Kelimeler – 2,6-Piridindikarboksilik Asit, Metal Kompleksi, Organik Asit, Organik Baz, Biyolojik Aktivite

I. GİRİŞ

Piridindikarboksilik asitler, piridin halkasında bulunan elektron verici azot atomu ve iki karboksilik asit grubundaki dört oksijen bulunduran organik asitlerdir. Piridindikarboksilik asitlerin altı farklı izomeri vardır. Bunlar 2,3; 2,4; 2,5; 2,6; 3,4 ve 3,5 piridindikarboksilik asittir. 2,6-Piridindikarboksilik asit ve türevleri, suda çözülebilen, çeşitli işlemlerde enzim inhibitörü,

insülin-mimetik etkileri, düşük konsantrasyonlarda demir analizleri, bitki koruyucu, gıda dezenfektanı ve kataliz gibi olarak kullanım alanları vardır [1]. 2,6-Piridindikarboksilik asit ve türevleri metal iyonları ile piridin halkasında bulunan azot atomu ve iki karboksilik asit grubundaki dört oksijenden bağlanarak kompleks oluşturdukları gözlenmiştir. 2,6-Piridindikarboksilik asit metal iyonlarına bağlanma örnekleri Şekil 1'de gösterilmiştir [1].

Şekil 1. 2,6-Pirindindikarboksilik asitin metal iyonlarına bağlanması örnekleri

II. MATERİYAL VE YÖNTEM

Bu çalışmada Scifinger programı kullanılarak literatürde bulunan 2,6-pirindindikarboksilik asit türevlerinin Cr(III) ile oluşturdukları basit ve karşık ligandlı metal kompleksleri incelenmiştir.

III. BULGULAR

Cr(III) metal iyonu ile 2,6-Pirindindikarboksilik asit'in $\{[Cr(pka)_2]\}^+$ [2], $Na[Cr(pka)_2]$ [3], $Cr(OH)[pka](H_2O)$ [4], $Rb[Cr(pka)_2]$ [5], $[Cr(pka)_2(H_2O)_2]^-$ [6], $Na[Cr(pka)_2]$ [Cr(pka)(Hpka)(H₂O)₂] [7], $[Cr(pka)(H_2O)_3]^+$ [8], $[NaCr(pka)_2(H_2O)_2]_\infty$ [9], $Na_2[Cr(pka)_2]$, $K[Cr(pka)_2]$ [10], $Na[Cr(pka)_2].2H_2O$ [11],

$[Cr_2(OH)_2(pka)_2(H_2O)_2]$ [12], $K[Cr(pka)_2]_n$ [13], $[Cr(H_2O)(OH)(pka)]_2$ [14], $[H_3O][Cr(pka)_2][H_3O^+Cl^-]$ [16], $[Cr(H_2pka)_3]Cl_3$ [16], $[Cr(pka)_2]^-$ [17], $NH_4[Cr(pka)_2]$ [18], $K[Cr(pka)_2]_n$ [19] ve $[Cr(pka)(H_2O)_3]Cl.2H_2O$ [20]}, 4-hidroksikloro-piridin-2,6-dikarboksilik asit'in (H_3ca ve H_2Clpka) $\{[Cr(Cl pka)(OH_2)OH]_2.2H_2O\}$ [16,21,22], $\{[Cr(Hca)(OH_2)OH]_2.4H_2O$, $[Cr(H_3ca)_3]Cl_3\}$, piridin-2,6-bistiyokarboksilik asit (H_2ptika) $[Cr(ptika)_2]^-$ [22] ve piridin-2,4,6-trikarboksilik asit'in (H_3ptka) $\{Cr(ptka)\}$ [23] basit metal kompleksleri sentezlenmiş ve yapıları aydınlatılmıştır.

IV. TARTIŞMA VE SONUÇLAR

Piridindikarboksilik asit türevleri ile diğer organik ligandların bulunduğu birçok çalışma yapılmaktadır. Piridindikarboksilik asit türevleri antiülser, süperoksit giderici, antimikrobiyal, antidiyabetik, antitümör, antimütajen ve antiinflamatuar gibi aktivitelere sahiptir. Bu aktif grup ile diğer organik veya organik olmayan bileşiklerin bir araya gelmesiyle elde edilecek cokristal, tuz ve metal komplekslerinde aynı türde özelliklere göstereceği aşikardır. Piridindikarboksilik asit türevleri ile organik veya organik olmayan bileşiklerinden elde edilecek cokristal, tuz ve komplekslerin sentezlenmesi ve aktivitelerin incelenmesi literatüre önemli katkı yapacaktır.

TEŞEKKÜR

Bu çalışma, Kütahya Dumlupınar Üniversitesi Bilimsel Araştırma Projeleri Komisyon'unca, 2023/23 numaralı proje olarak desteklenmiştir. Katkılarından dolayı Kütahya Dumlupınar Üniversitesi Bilimsel Araştırma Projeleri Komisyonu'na teşekkür ederiz.
